

Academic Answers “CarbonZero” Project

Academic Answers goes CarbonZero

We have teamed up with carbon management company [co2balance](http://co2balance.com) to take action on our carbon footprint and go CarbonZero.

As part of going CarbonZero, we have calculated our carbon footprint, and offset our carbon dioxide emissions to help reduce our impact on climate change. In doing so we are supporting co2balance’s African Energy Efficiency Projects.

African Energy Efficiency Projects

The project is based around supply local communities with energy saving equipment in Africa, such as energy efficient stoves in Kenya. These stoves significantly reduce the amount of fuel that is needed, producing far less carbon emissions that would have otherwise been created.

As the stoves are built locally they also provide employment to the area. In addition to the saving in [greenhouse gas emissions](#), the reduced need for firewood and the burning of rubbish leads to a corresponding reduction in the amount of time spent collecting the material and a reduction in deforestation.
